Research Works

1. **Title:** “[Automatic Bangla Digital Number Plate detection and recognition system using image processing and Deep learning](#)” Supervisor: Dr. Md. Nawab Yousuf Ali, Professor, Department of Computer Science & Engineering. This research develops a framework for automatic Bangladeshi number plate detection and recognition using YOLO V7 for plate detection, image processing techniques for character localization, and VGG19 for character recognition, achieving high performance and accuracy throughout the process.
2. **Title:** “[Integrated Feature Selection-Based Stacking Ensemble Model Using Optimized Hyperparameters to predict Breast Cancer with Smart Web Application.](#)” Supervised by Dr. Mohammed Nasir Uddin, Professor, Department of CSE, Jagannath University. This research developed a high-accuracy predictive model and user-friendly web app for early breast cancer detection using advanced machine learning techniques.

Some Related Projects

[AmaderHR:](#) Designed automated and executed manual test cases and bug reports for critical HRM functionalities, including Dashboard, User, Education, Bank, employee management.

[Heart prediction using machine learning disease:](#) Jupyter notebook. This project emphasized three primary treatment approaches for heart failure: lifestyle changes, medication, and other treatments.

[Students Management System.](#) VS Code, MySQL. PHP is used to access the database for login page, data store page, view data page and remove data page. Html, CSS is used for background design.

[Ecommerce Website:](#) PhpStorm. An ecommerce website made in Laravel where user can shop online.

[Olympic 2020 website:](#) Oracle Apex Database. A website using oracle apex and SQL serAver.
